

Polycarbonate Structured Multiwall Sheet

Polygal Solar Grade Polycarbonate Structured Sheet (PCSS) is a tough, light weight, insulating glazing sheet extruded from high performance polycarbonate. Its many advantages make Polygal PCSS an attractive, budget-minded alternative for a wide variety of exterior glazing applications, including skylights and roof windows, atria, sports halls, industrial plants, pool enclosures, greenhouses, solar collectors, canopies, window renovations and many more.

Features & Benefits

Polygal Standard Sheets double and triple layered, manufactured in various colors and degrees of transparency, are designed for use in most conventional roofing and glazing applications.

Excellent thermal insulation

Highly flexible, yet virtually unbreakable

Lightweight and easy to install

Rigid sheet structure provides extra strength under wind and snow loads. To see sheet performance under loads, go to "Support / Wind Load Charts".

Standard Sheets feature a UV protective layer to protect against yellowing, and are covered by a 10 Year Warranty against breakage and yellowing (6 mm and higher).

Recommended Uses: Covering of medium span structures where excellent thermal insulation is required.
